Art Unit: 2133

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 30-47, 50 and 51, drawn to A Communication System Comprising a Transmission Method and a Transmitter whereby After Receiving a Request for Retransmission for an Un-decodable Block, the Requested Block of Data Is Added to Be Included with Other Blocks in a Next Transmission Packet, classified in class 714, subclass 751.
- II. Claims 49 and 50, drawn to A Receiving Method and Receiver for providing a Retransmission Request whereby the Retransmission Request Includes Identification of a Last Outputted Block in a Data Packet that has Been Received, classified in class 714, subclass 748.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I, A Communication System Comprising a Transmission

Method and a Transmitter whereby After Receiving a Request for Retransmission for an

Un-decodable Block, the Requested Block of Data Is Added to Be Included with Other

Blocks in a Next Transmission Packet, and Group II, A Receiving Method and Receiver

for providing a Retransmission Request whereby the Retransmission Request Includes

Identification of a Last Outputted Block in a Data Packet that has Been Received, are

related as combination and subcombination. Inventions in this relationship are distinct if

it can be shown that (1) the combination as claimed does not require the particulars of

Art Unit: 2133

the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination, Group I, A Communication System Comprising a Transmission Method and a Transmitter whereby After Receiving a Request for Retransmission for an Undecodable Block, the Requested Block of Data Is Added to Be Included with Other Blocks in a Next Transmission Packet, as claimed does not require the particulars of the subcombination, Group II, A Receiving Method and Receiver for providing a Retransmission Request whereby the Retransmission Request Includes Identification of a Last Outputted Block in a Data Packet that has Been Received, as claimed because the combination does not require that the retransmission request include identification of a last outputted block in a data packet that has been received. The subcombination has separate utility such as in a Prior Art retransmission apparatus whereby the entire retransmission packet is dedicated to providing the requested block of information.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

Art Unit: 2133

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Robert Downs on 20 April 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph D. Torres whose telephone number is (703) 308-7066. The examiner can normally be reached on M-F 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Albert Decady can be reached on (703) 305-9595. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
